The problem under study is development of resilience in teachers under conditions of educational environment at institutions of further vocational education. It shows that modern teachers' resilience is a personal disposition, which is the resource of prevention for negative professional and personal changes under conditions of multiple difficult situations in their professional activity. The article presents the authors' model for development of resilience in teachers under conditions of educational environment at the institute of further training and retraining for educators.

Key words: personal resilience; professional and personal changes in educators; educational environment.
